MINGO COUNTY– LENORE PK-8 HVAC REPLACEMENT & NEW CONTROLS

Lenore PK-8 was constructed in 2002. The HVAC system is constantly malfunctioning and causing health/safety issues.

The county has resorted to renting industrial dehumidifiers, each filling a 32 gallon container per day.

In-room thermostats are of varying age and manufacturers. Each device controls the climate for two classrooms.

Rooftop units, of differing brands, are at the end of their life-expectancy, and are not operating properly.
